Support from the National Postsecondary Education Cooperative (NPEC)

Student Investment in Postsecondary Education

Oregon

What Do Oregon Students Pay Relative to the U.S. Average?

Net Undergraduate Tuition and Fees* In Oregon Compared to the U.S. Average, by Sector for 2002-03

*Net undergraduate tuition and fees includes tuition, fees, and other expenses for a full-time resident freshman minus the total of all federal, state and institutional grant aid for the academic year. Room and board costs are not included even though some portion of the total grant aid could be used to defray room and board expenses.

Net Gain or Loss By Degree-Level and Age-Group (1995 to 2000)

Note: Net "gain or loss" is the number of in-migrants minus the number of out-migrants

Source: U.S. Census Bureau, 2000 Census 5% Public Use Microdata Samples

Oregon Summary

- Oregon students pay more than the U.S. average for tuition and fees in all sectors of postsecondary education.
- After attaining their degrees, the increase in earnings (over a high school diploma) for associate degree-earners is above the U.S. average but below the average of the top ten states. The increase for bachelor's degree-earners is below the U.S. average and the average of the top ten states.
- Long-term Oregon residents earn more on average than those who recently moved in from out-of-state – at the high school, associate, and bachelor's levels.
- Oregon's investment in postsecondary education relative to its population 18 to 44 with a high school diploma or some college but no degree (the majority of residents ready to enter postsecondary education or complete degrees) is below the U.S. average.
- Relative to the same population, Oregon's postsecondary education system awards fewer undergraduate credentials at all levels than the U.S. average and the average of the top ten states.
- Oregon benefits from the in-migration of college-educated residents. However, it also experiences a large net in-migration of less-educated residents (those with less than a high school diploma or a high school diploma but no college).

Note: This analysis does not include measures for each state's K-12 system and their success in preparing residents for college (e.g., high school test scores and graduation rates). It also does not include state investment and performance in postsecondary education research. For more information on how well states do on these and many other measures, see www.higheredinfo.org.
